

# Titan Module: Discover

## CLASSIFICATION, DIGITIZATION, AND INDEXING OF UNSTRUCTURED DATA

Titan Discover is a powerful AI-driven engine that acquires, digitizes, and indexes paper and digital records at enterprise scale - transforming unstructured data into actionable intelligence.

### KEY CAPABILITIES:

Digitize and index paper records, PDF, and DICOM files at scale.

Classify unstructured datasets with over 99% accuracy.

Discover and protect sensitive data across platforms (Google Drive, OneDrive, SharePoint, etc.)

Dynamically align unstructured data with structured systems (EHRs, CRMs, ERP systems)

Sub-millisecond processing for critical operational environments

Identify HIPAA and PII/PHI elements with auto-redaction, masking, tokenization, and data synthesis to enable safe data mining.

Linguistics-first AI ensures nuanced understanding and extraction of context-rich data.

### USE CASES:

Medical record digitization and consolidation

Government and legal document automation

Compliance and sensitive data risk management
